# Safety Gas

## Safety Device For Your LPG Cylinder

### The Main Features of Safety Gas Device :

- Major leakage auto shut off facility
- Minor leakage testing facility
- Save up to 25% of gas
- Low gas indicator
- 3 years replacement warranty

Every household of this modern age is using cooking gas for cooking food. Though cooking gas is user friendly but in case of gas leakage it can cause big disaster to your family & property. Safety Gas is an innovative mechanical device launched for domestic LPG gas cylinder to avoid accident caused by LPG gas leakage. It indicates even a minor leakage (leakage in tube or stove) within a minute and shut off the supply of LPG gas automatically to avoid any explosion. Even if there is a problem in regulator, it cuts the supply of LPG.

Safety Gas will automatically shut-off the gas supply from the cylinder due to major leakages of gas caused due to:

1. The rupturing of a tube or pulling off the stove or regulator.
2. The regulator failed to function properly.
3. The tube catching fire.

Safety Gas device also has a gas level indicator which shows quantity of gas in the cylinder.

### Installation Method:

First Remove the regulator from the LPG Cylinder.

In its place fix the Safety Gas device on the LPG cylinder.

Now take the regulator and fix it on to the Safety Gas device.

Depress the Safety Gas gauge dial a few times till the needle of the gauge rises
